Advance Course in Primavera

Overview

Primavera P6 deals with project management in all major industry domains like civil, mechanical and electrical. Professionals who are knowledgeable in project management skills and techniques can use Primavera to promote agility and productivity in organizations.

Course Duration: 64 Hrs. (Theory- 32hrs + Practical- 32hrs)

Expected Learning Outcome

The course helps participants design, develop, and maintain detailed resource-loaded schedules; modify project schedules and or integrate multiple project schedules. The participants are trained to create time-phased budgets to specific contract tasks and/or statements of work; provide the basis to capture work progress assessments against the baseline plan. The course demonstrates the useful applications of software in project management and helps participants develop skills to handle projects using Primavera, covering all basic features of the software available over web and offline.

Course Curriculum Primavera Advance

- Real time Project Scheduling
- Critical Path
- Resource Leveling
- Resource Smoothing
- Real-time Project Tracking
- Earned Value Management
- Report customization
- Managing the user privileges
- Real time Primavera Administration
- OBS and EPS Structure

Course Justification

The course equips participants to provide necessary administrative support to project management teams; to set user privileges; to rout contracts and change orders; to reconcile billings and invoices; distribute necessary documents to appropriate teams, among others. The participants will also be trained in organizing projects, people, and work using Organizational Breakdown Structure (OBS) and Enterprise Project Structure (EPS)
